

zApps REVIEWER GUIDE

MAC USERS – EXTRACTING AND SAVING FILES

1. Click on the zApps zip file you downloaded. The Archive Utility in the Mac operating systems “Snow Leopard”, “Leopard” or “Tiger” will unzip the file and automatically create a folder for the resulting content. Figure 1 shows the Archive Utility as it unzips a zApps file for the example “201005_PTHE.zip”.

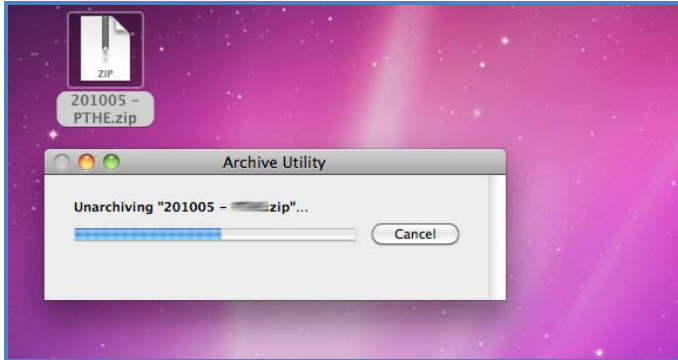

Figure 1 - Mac Archive Utility unzipping the zApps file for a sample NIH Study Section.

2. Once the unzipping process is complete, a folder will be automatically created which will contain the application files and review guidelines for the study section meeting.

Suggestions to improve zApps can be submitted at <http://internet.csr.nih.gov/CSRAppEnhancements/default.aspx>
